

Modifying your Authentication Methods - Microsoft

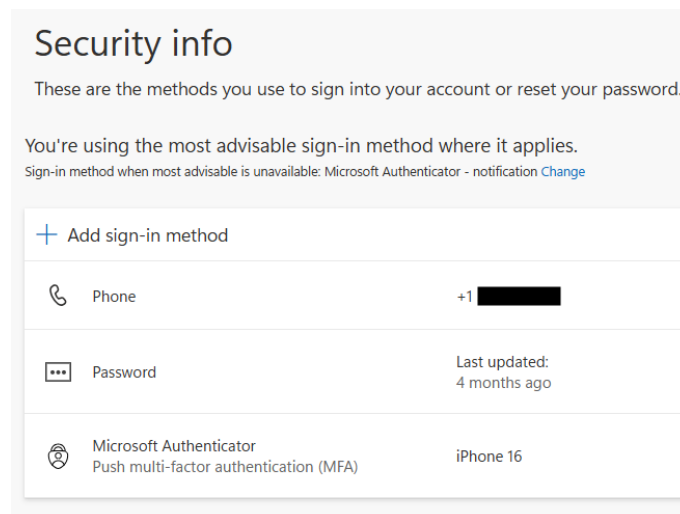

To ensure uninterrupted access to company resources and prepare for upcoming security enhancements, we're asking all users to verify their authentication methods. Please take a moment to review your security info and update if needed.

Go to: <https://mysignins.microsoft.com/security-info> and sign in with your *REDACTED* account.

Check Your Security Info

On this page, you can:

- View your current authentication methods (e.g., phone numbers, Authenticator, password, etc.)
- Remove outdated methods (such as an old phone number or authenticator device.)
- Add or update methods to ensure you can securely sign in.
 - **If the methods (example below) shown are current and you have been using them, you do not need to make any changes.**
 - If they are outdated, please use the 'Add sign-in method' to add "Microsoft Authenticator." Note: Email is no longer supported as a sign in method.
 - You should have **at least** your Password and Microsoft Authenticator listed.

Why this matters

MFA (Multi-factor Authentication) can prevent 99% of identity-based attacks when implemented properly. Outdated or missing authentication methods may prevent access to your account once MFA policies are enforced.

Best Practices

- If you are unable to sign into your account due to no longer having access to your MFA methods, you can request an MFA reset by contacting your IT Team via *REDACTED*.
- When you acquire a new smartphone or phone number, remember to update your MFA methods for your account using the page above.
- NEVER give your MFA Codes or Passwords to ANYONE.

FAQ's

- ***How many authentication methods can I add to my account?***
 - There is no limit to the number of authentication methods you can add to your account, but keep in mind that only the following are supported in our environment: Microsoft Authenticator, Phone SMS text/Call, Passkeys, Hardware/Software tokens. The IT Department does not provide hardware-based tokens to employees. The IT Department recommends the following: Your password, Microsoft Authenticator, and a cell phone number.
- ***What do I do if I no longer have any available authentication methods and I can't sign in?***
 - In cases like this, the best course of action is to contact *REDACTED*. They will then confirm your identity via Video confirmation and reset your MFA methods. If you do not have access to Slack, and can't sign into your account, contact *REDACTED* via your personal email and we will send you a teams meeting link to verify your identity.
- ***What do these MFA policies apply to?***
 - The processes and information listed in this document mainly applies to *REDACTED*. However, this does not mean MFA is limited to this service. Other services, like *REDACTED*, etc., may also be subject to their own MFA policies.
- ***I am logging in from a different location than usual (i.e. travel) and I can't sign into Microsoft. What do I do?***
 - Some locations are blocked from access to prevent attacks. If your sign in request is originating from a country like Iran, China, or Russia, your access may be blocked entirely. Sometimes this is caused from being connected to a VPN. Disconnect from any non-*REDACTED* VPN's and try again. If you are on legitimate travel to a blocked country and can't sign in, please reach out to the IT Team via *REDACTED* for identity verification and assistance. If you do not have access to Slack, contact *REDACTED* via your personal email and we will send you a *REDACTED* link to verify your identity and assist with access.
